

No Code Platform for Digitalizing Processes

Reduces Manual Work

Enables Full Accountability

Boosts Productivity

Ensures Full Traceability

Accelerates Cycle Time

iSmartWorks helps digitize numerous business processes without the need for any programming. Leveraging AI and/or the drag-and-drop feature, users can quickly build forms, publish these forms, and enable mobile access to the users through any Android or iOS device.

Features

- AI-Powered Form Creation
- Drag-and-Drop Builder
- Data Analysis and Reporting
- Mobile-Friendly Form Design and Data Collection
- Extensive Form Fields
- iOS, Android Mobile Application
- Capture Accurate Data Instantly
- Enable IT and OT integration for IoT Initiatives
- Enhance Customer Engagement
- Integration with Business Applications
- Scalable
- Offline Data Capture

Drag-and-Drop

The form builder interface is split into two main sections. On the left, a 'Drag-and-Drop' panel contains various form elements: Text Input, Multiple Choice, HTML, Time, Drop Down, Slider, File Upload, Page Break, Text Area, Radio, Switch, Date, Checkbox, Number input, and Video. The central area shows a form being built with fields for 'Report Date' (yyyy-mm-dd), 'Worker Name' (REQUIRED), 'Work Location' (REQUIRED, Enter Address), and 'Hours Worked' (REQUIRED, Enter Number). On the right, an 'AI Prompts' section is titled 'Builder Mode' and includes 'Create new form' and 'Edit form' buttons. Below these are 'Previous Prompts' and 'Form Changes' sections, with a text area for 'Describe the changes you want to make...' and an 'Update Form' button at the bottom.
